Angavu / Dawa Intel — Chat Handoff Document

For Ezra. Paste this at the start of a new Claude chat to continue seamlessly.

WHO I AM

Ezra. BPharm student at Kabarak University, Nakuru Kenya. Also doing a BBA at University of the People. Background in AI data annotation (Appen/Scale AI), inventory analysis, FP&A work at Yhecut Media (printing company, 8 branches), ALX software engineering training, Kaggle data analytics.

THE BUSINESS: ANGAVU

Umbrella brand (Swahili: "bright/illuminated") covering four modules of business intelligence for Kenyan SMEs. Previously called Dawa Intel for the pharmacy module — pivoted to Angavu as the master brand after discovering a Dawa Intel exists in Tanzania.

Four modules:

- **Angavu Pharmacy** (formerly Dawa Intel) — stock intelligence, expiry tracking, Monday WhatsApp alerts. KES 2,000–5,500/month. System is BUILT and TESTED.
- **Angavu Finance** — revenue/cost/cashflow tracking, multi-branch or single-location. Already built and deployed at Yhecut Media (the reference client). KES 3,500–25,000/month.
- **Angavu Inventory** — stock/reorder intelligence for non-pharmacy retail. Natural extension of the Finance Tracker. KES 2,500–7,500/month. To be built.
- **Angavu Analytics** — FP&A, forecasting, valuation, strategic reports. KES 25,000–50,000/project or KES 15,000–25,000/month retainer.

Single-location vs multi-branch: Same engine. Branch layer hidden for single-location clients. Same pricing tiers, lower entry point for single-location.

To register: angavu.nakuru@gmail.com + WhatsApp Business profile. KIPI trademark filing (KES 6,000–10,000).

WHAT HAS BEEN BUILT THIS CONVERSATION

1. DawaIntel_MasterTracker_v2.xlsx ✅ COMPLETE

The master Google Sheet for Angavu Pharmacy. **367 tests passed, 0 failed.**

5 tabs:

- Instructions — column guide, colour legend, key rules
- Mary Wanjiku Pharmacy — 20 drugs, rows 4–23, all formulas
- Batch Register — 14 batches, expiry dates, auto days-to-expiry
- Overview Dashboard — live COUNTIF summary across all pharmacy tabs
- Form Responses 1 — 74 simulated entries (8 weeks of realistic data)

Key formula specs (all correct and tested):

- **Col C (Current Stock):** AUTO from Form entries. Formula: `=IFERROR(M4 + SUMPRODUCT(received) - SUMPRODUCT(dispensed) - SUMPRODUCT(expired) + SUMPRODUCT(returned), 0)`. Form columns: B=pharmacy, C=date, E=drug, F=movement type, G=quantity.
- **Col D (Weekly Avg):** SUMPRODUCT last 90 days dispensed / (days/7*7)
- **Col F (Days Remaining):** `=IFERROR(IF(E4=0,IF(C4>0,999,0),ROUND(C4/E4,0)),0)`
- **Col H (Stock Status):** STOCKOUT/CRITICAL/LOW/ADEQUATE/GOOD (thresholds: 0,7,14,30)

- **Col I (Nearest Expiry):** AUTO from Batch Register via MINIFS — filters Active batches + future dates only. Returns "No active batch" if none.
- **Col J (Days to Expiry):** `=IF(OR(I4="",I4="No active batch"),"",INT(DATEVALUE(I4)-TODAY()))` — CORRECTED: uses INT(I-TODAY()) not DAYS() which was backwards.
- **Col K (Expiry Status):** EXPIRED/EXPIRES SOON/EXPIRING 60D/OK
- **Col L (Alert Flag):** ACTION NEEDED / MONITOR / OK — the Sunday scan column
- **Col M (Opening Stock):** Manual, enter once on Day 1, then lock

One Google Form, one Form Responses tab, multiple pharmacy tabs — each pharmacy tab filters by its own name in B column.

To link existing form: Responses tab → Link to Sheets → Select existing → pick DawaIntel_MasterTracker_v2. Drug names in form dropdown must match col A exactly (case-sensitive).

2. Stage 1 & 2 Toolkit (DawaIntel_Stage1_2_Live.jsx) ✅ COMPLETE

React app with 5 tabs: Stage 1 Setup Guide, Sheets Formula Builder (all formulas update live when pharmacy name changes), Report Generator (live preview), WhatsApp Composer, Stage 2 Tools (invoice generator, sales script, onboarding checklist).

Bug fixed in formula builder: All formula strings now use proper template literals — changing pharmacy name in the config box updates ALL formulas, not just the weekly avg. Column mapping corrected: B=pharmacy, C=date, E=drug, F=type, G=qty.

3. Angavu_Platform_Concept.html ✅ COMPLETE

Full brand reveal document. Contains: the Angavu name rationale, 4-module architecture diagram, module cards with features and pricing, single vs multi-branch comparison, 3 pricing tiers, the 60-second pitch script, 6 competitive differentiators, build-order roadmap, WhatsApp bio options.

4. DawaIntel_Canvas_Pitch.html ✅ COMPLETE

Business Model Canvas (full 9-block layout), Value Proposition (4 cards), full investor/customer pitch (6 blocks), competitive edge table (5 competitors), WhatsApp business description options with all profile fields.

OPERATIONAL DECISIONS MADE

Onboarding a pharmacy — full sequence:

1. Verbal agreement on trial terms
2. Get WhatsApp + staff contact immediately
3. Walk shelves → identify top 20 drugs

4. Physical stock count together → enter in col M
5. Fill Batch Register for current stock (one row per drug, get expiry from box — if multiple batches, multiple rows, if can't find expiry write "expiry to confirm")
6. Set up Form on staff's own phone — make them fill one entry themselves
7. Set expectations: daily form, Monday 8am report, 30-day review
8. Same evening: verify Form link works, send WhatsApp confirmation
9. Day 1 morning: check-in WhatsApp
10. Day 3: check Form responses are coming in, call if not
11. Day 7 Sunday: first real Sunday review → send first Monday report
12. Day 28: on-site Month 1 review → calculate KES value of prevented losses → pitch paid subscription

Batch Register workflow: Fill on Day 1 during onboarding (one row per drug from current shelf stock). When new stock arrives, staff log Received in Form AND add row to Batch Register with expiry date. If expiry not found, note "expiry to confirm" and follow up Day 3.

Drug naming convention: Generic name + strength + form only (e.g. "Metformin 500mg tabs"). Never brand names. Staff pick from dropdown — no freehand typing.

Regional Avg (col G): Manual for now. Benchmarks: chronic disease 28d, antibiotics 18d, analgesics 14d, antimalarials 15d, GI 16d, inhalers 30d. Automate with

AVERAGEIF across pharmacy tabs once 3+ pharmacies enrolled.

WHAT IS PENDING / NEXT

- [ ] Register Gmail: angavu.nakuru@gmail.com
- [ ] Set up WhatsApp Business profile (name: Angavu, use Option 1 description from concept doc)
- [ ] Print 50 business cards: Angavu · Business Intelligence · [phone] · angavu.nakuru@gmail.com
- [ ] File KIPI trademark for "Angavu"
- [ ] Link existing Google Form to DawaIntel_MasterTracker_v2.xlsx
- [ ] Confirm Form pharmacy name dropdown matches "Mary Wanjiku Pharmacy" exactly
- [ ] Walk into first pilot pharmacy — opening question memorised
- [ ] Build Angavu Inventory module (extend Finance Tracker with stock tab + reorder alerts)
- [ ] Build Angavu Finance single-location tier (same system, branch layer hidden)
- [ ] Start Evidence File Google Doc before first pilot

KEY NUMBERS TO REMEMBER

- Break-even: 26 clients at KES 5,200 average = KES 135,000 MRR

- One prevented stockout = KES 8,000–25,000 saved
- One prevented expiry write-off = KES 5,000–40,000 saved
- Subscription: KES 3,000/month Standard → pays for itself first time it works
- Nakuru pharmacies: 280–350 outlets, no well-funded competitor yet
- Field Intelligence (closest competitor) not in Nakuru — window ~18–24 months

---

FILES PRODUCED (all in outputs folder of the session)

File	Status	What it is
DawaIntel_MasterTracker_v2.xlsx	✅ Final	The master Google Sheet — use this
DawaIntel_Stage1_2_Live.jsx	✅ Final	Stage 1 & 2 operational toolkit (React)
Angavu_Platform_Concept.html	✅ Final	Full platform concept

File	Status	What it is
		and brand document
DawaIntel_Canvas_Pitch.html	✅ Final	Business model canvas and investor pitch
DawaIntel_MasterTracker.xlsx	Superseded	v1 — replaced by v2, ignore
DawaIntel_Stage1_2_Toolkit.jsx	Superseded	Earlier version of toolkit, ignore

---

HOW TO CONTINUE IN A NEW CHAT

Paste this entire document at the start of your next conversation. The new session will also have access to your memory files which store key decisions and project context. The transcript of this full conversation is also stored in your account's transcript system at `/mnt/transcripts/` and Claude can read it incrementally if specific earlier details are needed.

Suggested opening for the next chat:

> "Here is a handoff document from my previous chat. We are building Angavu — a business intelligence platform for Kenyan SMEs. [paste this document]. I want to continue from where we left off, specifically [what you want to do next]."
