THE BRAND

Why Angavu

The name is the strategy. Here is why it works better than anything that describes what the product does.

ANGAVU

SWAHILI · /Aŋ.ɠA.VU/ · ADJECTIVE

"Bright. Illuminated. Full of light. Clear where there was darkness."

The thing that happens to a business when it can finally see its own numbers.

Most business software names describe a function — QuickBooks, FreshBooks, TradeGecko. They tell you what the tool does. Angavu tells you what it **feels like** when it works. That is a fundamentally different kind of brand, and it is the kind that people remember and repeat without being prompted.

It is also a Swahili word — immediately legible to any East African business owner without explanation, connoting clarity and intelligence, with no obvious competitor using it in this space. It works across all four modules without modification. A pharmacy owner, a printing company CEO, a single-shop retailer — all of them understand "angavu" without a translation.

On the Dawa Intel Tanzania situation: Angavu is the umbrella that makes that concern irrelevant. The pharmacy module becomes **Angavu Pharmacy** — distinct from anything in Tanzania, protected under Kenyan trademark law as soon as you file (KIPI, KES 6,000–10,000, filing date is what matters). The

"Dawa Intel" brand can live on as the product name within Angavu Pharmacy if you want continuity with clients who already know it — or you retire it cleanly. Either way, Angavu is the name people will know.

THE CORE CONCEPT

One platform. Four modules. Every Kenyan SME.

The insight that makes this unconventional: you are not building four separate products. You are building one intelligence layer that looks different depending on which business problem it is solving.

PLATFORM ARCHITECTURE

THE CLIENT LAYER

Any Kenyan SME — single location or multi-branch

Independent pharmacy · Retail shop · Printing company · Hardware store · Clinic · Restaurant · Wholesale outlet

↓

THE INPUT LAYER

Google Forms + WhatsApp — tools every Kenyan SME already uses

No app download. No training required. Staff log transactions the same way they already send messages. Data flows into Angavu automatically.

↓

THE INTELLIGENCE LAYER — ANGAVU

Angavu Pharmacy	Angavu Finance	Angavu Inventory	Angavu Analytics
Stock · Expiry · Alerts	Revenue · Costs · Cashflow	Stock · Orders · Wastage	Reports · Forecasts · Trends

↓

THE OUTPUT LAYER

Monday morning clarity — WhatsApp report + dashboard + alerts

The business owner wakes up Monday knowing exactly what their numbers say, what needs attention, and what to do about it. No interpretation required.

THE FOUR MODULES

What Angavu actually delivers

Each module is a standalone product that can be sold independently — and a more powerful combined offer when bundled. Start with what the client needs most.

MODULE 1 — ALREADY BUILT

Angavu Pharmacy

Formerly Dawa Intel · Stock intelligence for pharmacies

Tracks drug stock levels, predicts stockouts before they happen, monitors expiry dates across all active batches, and benchmarks against regional averages. Delivers a Monday morning WhatsApp alert with everything the pharmacist needs to know for the week.

Already proven: you have a working spreadsheet system, realistic test data, a formula suite, and a pitch that closes. This module is the furthest along.

- Stockout prediction (days remaining)
- Regional benchmarking (Nakuru averages)
- Auto-updating stock from Form entries
- Expiry batch tracking (auto from register)
- Monday WhatsApp intelligence report
- KEML-seeded drug master list (50 drugs)

KES 2,000–2,500 Starter **KES 3,000–3,500 Standard** **KES 4,500–5,500 Plus**

MODULE 2 — PROVEN IN THE FIELD

Angavu Finance

Revenue, costs, cashflow, and forecasting for any SME

You built this for Yhecut Media and it works across 8 branches. A Google Forms quick-entry interface for the owner or manager, Apps Script routing into the right tabs, automated email digests, branch-level summaries, and a CEO dashboard. For single-location businesses, it is the same engine with the branch layer removed.

Already proven: a real company with real branches is using a version of this right now. That is your case study, your testimonial, and your live demo all in one.

- Daily transaction logging (Google Form)
- Revenue vs costs dashboard (auto)
- Bills and payments due tracker
- Supplier claims management
- Branch-level summaries (multi-branch)
- Budgeting, forecasting, variance analysis

Single-location tier: same system, branch-switching layer hidden, simplified dashboard. One price point lower than multi-branch. Upgrade path is natural as they grow.

KES 3,500 Single location **KES 6,000–8,000 Multi-branch** **KES 15,000+ Full FP&A**

MODULE 3 — NATURAL EXTENSION

Angavu Inventory

Stock intelligence for non-pharmacy retail and wholesale

The same logic as Angavu Pharmacy — stock tracking, reorder alerts, wastage monitoring, supplier management — applied to any retail business: hardware stores, supermarkets, stationery shops, wholesalers, printing companies. Different drug list, same formula architecture.

Why this module matters: it unlocks the entire non-pharmacy SME market in Nakuru — which is ten times larger than the pharmacy market. And you have already done inventory analysis professionally at Yhecut. That experience is the credibility.

- Auto-updating stock from Form entries
- Reorder point alerts by SKU
- Supplier order tracking
- Wastage and shrinkage monitoring
- Fast vs slow mover analysis
- Monday morning stock briefing (WhatsApp)

KES 2,500 Starter (<50 SKUs) **KES 4,500 Standard (50–200 SKUs)** **KES 7,500 Pro (200+ SKUs)**

MODULE 4 — THE PREMIUM TIER

Angavu Analytics

Custom reports, forecasting, and strategic business analysis

For businesses that want more than a dashboard — they want answers. What will revenue look like in Q3 based on current trends? Which product line is quietly losing margin? Where is cash actually going? This is where your FP&A experience, data science training, and business administration knowledge converge into a premium consulting and reporting service.

Priced as a project or retainer, not a subscription. This is where the per-engagement fees are highest, and where a single client relationship can generate more revenue than ten Standard subscribers combined.

- Custom financial models and forecasts
- Cash flow forecasting (13-week and annual)
- KPI dashboard design and implementation
- Month-end variance analysis and reports
- Business valuation (for fundraising or sale)
- Strategic decision support (data-backed)

KES 25,000–50,000 per project **KES 15,000–25,000/month retainer**

SAME ENGINE, TWO VIEWS

Single-location vs. multi-branch — not a fork, a tier

The architecture does not change. What changes is which layer the client sees.

🏪 Single-Location Business

One shop. One owner. Simple and fast.

- → One dashboard, one view — no branch selector
- → Simplified Quick Entry form (no branch field)
- → Revenue, cost, stock — all on one screen
- → Monday WhatsApp report: one page, five numbers
- → Lower price point — accessible to smallest operators
- → Natural upgrade path: add branches as they grow

🏢 Multi-Branch Business

Multiple locations. CEO needs the full picture.

- → Branch selector on dashboard — toggle between locations
- → Cross-branch comparison view (who is performing)
- → Consolidated CEO summary tab (all branches, one view)
- → Per-branch Quick Entry forms routed via Apps Script
- → Branch-level alerts: which location needs attention
- → Higher price point — justified by complexity and value

> **The honest reason single-location matters more right now:** there are roughly 50 multi-branch SMEs in Nakuru worth approaching. There are 5,000 single-location businesses. The single-location tier is where you build volume, cash flow, and reputation. The multi-branch tier is where you build margin and case studies. You need both, but you start with one.

PRICING

Three tiers. Clear value at each level.

Priced so that the entry tier is a genuine no-brainer, the standard tier is where most clients land, and the premium tier is where the margin lives.

STARTER

Angavu Lite

Single module · Single location

KES 2,000 –

3,500 / month

- ✓ One module (Finance or Inventory or Pharmacy)
- ✓ Up to 30 SKUs or transactions per day

- ✓ Multi-branch dashboard + CEO summary
- ✓ Full FP&A reporting (monthly)
- ✓ Quarterly strategic review session
- ✓ Custom KPI dashboard design
- ✓ Dedicated account manager (you)
- ✓ Priority same-day support

THE PITCH — FOR ANY BUSINESS OWNER

What you say when they ask what Angavu is

The 60-Second Pitch

For a business owner you've just met. Works for pharmacy, retail, or any SME.

Opening question (ask, don't pitch):
"Can I ask you something? At the end of last month — did you know, to the nearest ten thousand shillings, whether your business made money or lost it? And did you know which of your products were pulling their weight and which ones were quietly draining you?"

> *"Most business owners I've asked that question say they have a rough idea. Angavu gives you the exact answer, automatically, every Monday morning — in a WhatsApp message you can read in 60 seconds. No accountant. No spreadsheet you have to build yourself. Just your numbers, clear."*

The value anchor:
"We've found that most small businesses in Nakuru lose between KES 15,000 and KES 80,000 a month to problems they could have spotted if they had better visibility into their own numbers — late supplier payments, stock sitting dead on shelves, cash tied up where it shouldn't be. Angavu costs KES 3,500 a month. The first time it catches something you would have missed, it has paid for itself for the year."

The close:
"I'm offering one month free — no payment, no obligation. Your staff log transactions through a Google Form. I analyse the data every Sunday and send you a report Monday morning. After 30 days, if it hasn't shown you something useful about your business, cancel. If it has, we talk about continuing."

THE UNFAIR ADVANTAGES

Why people will not look away

Not features. The structural reasons why this is hard to ignore and hard to replicate.

01

You already have a live reference client

Yhecut Media is using a version of Angavu Finance right now. That is not a demo — that is a case study with real numbers, real branches, and a real CEO who can vouch for it. No competitor pitching to the same market can say that. The moment you walk into a prospect's office and say "here is what we built for a printing company with 8 branches in Nakuru" and show real dashboards, the conversation changes.

02

The input requires zero behaviour change

Google Forms and WhatsApp. Every business owner in Kenya already has both. Staff don't need training on a new app. Owners don't need to learn a new dashboard to get the Monday report. The product slots into existing behaviour instead of demanding new behaviour — and that is the single biggest reason SME software fails in East Africa. Angavu doesn't make that mistake.

03

Cross-module intelligence gets exponentially more valuable

A business on Angavu Finance and Angavu Inventory can see something no single-module system can show: the relationship between what they are spending on stock, what is actually moving, and what the cash position looks like in real time. That cross-module view is the product's most powerful feature — and it only exists because both modules are in the same system feeding the same data layer.

04

The founder's profile cannot be quickly replicated

Pharmacy training. Business administration. Data science. FP&A experience at a real multi-branch company. Inventory analysis in the field. ALX software engineering. Kaggle analytics. All of these simultaneously, in a 20-something founder in Nakuru who can walk into any business and speak both the clinical language and the financial language and the technical language. That combination is not hireable — it is only buildable by living it.

05

The Monday morning report is an addiction, not a feature

Business owners who receive a well-designed Monday morning intelligence report for 6 weeks in a row develop a dependency on it. Not in a manipulative way — in the way that anyone who has ever had clear information starts to feel blind without it. The weekly cadence, consistently delivered, is what converts a trial client into a long-term subscriber more reliably than any feature list.

06

Every client makes the network smarter

On the pharmacy module, every enrolled pharmacy improves the regional benchmarking for every other pharmacy. On the inventory module, every retail client contributes to understanding of which product categories move fastest in Nakuru. Over time, Angavu holds the most comprehensive SME operational dataset in Nakuru County — and that dataset is itself a strategic asset that no competitor can acquire without replicating your entire client history.

BUILD ORDER

What to build, in what order, and why

Sequence matters more than speed. Each stage funds and validates the next.

DONE — PROVEN

Angavu Finance (Yhecut Media build)

Multi-branch finance tracker, Quick Entry form, Apps Script routing, CEO dashboard, branch summaries, supplier claims. Built, deployed, and in use by a real company. This is your reference case study.

DONE — READY TO DEPLOY

Angavu Pharmacy (Dawalntel / Master Tracker v2)

Stock intelligence, expiry batch tracking, auto-updating stock, Batch Register, Overview Dashboard, 74 test entries, 367 tests passing. The system is built. The first client conversation is all that's left.

NOW — THIS MONTH

First paying clients on both modules

Walk into pharmacies with Angavu Pharmacy. Walk into the retail and service businesses you already know with Angavu Finance. Offer the free month. Get 3–5 pilots on each module. Send the first Monday reports. Build the Evidence File.

MONTH 2–4

Angavu Inventory — extend the Finance Tracker

The Finance Tracker already has a structure. Add a stock tracking tab and a reorder alert layer. The first client for this module is probably Yhecut itself — they have inventory. Use them as the pilot. Then sell it to hardware stores, supermarkets, and stationery shops in Nakuru.

MONTH 4–8

First cross-module client (Finance + Inventory bundle)

A retail business that is already on Angavu Finance gets offered the Inventory module at a bundle price. This is the moment the platform becomes more powerful than its parts. Document the cross-module insights carefully — this is the case study that unlocks the Pro tier.

MONTH 8–18

Angavu Analytics — formalise the FP&A service

By this point you have multiple clients with months of clean operational data. Offer quarterly analytical reports, forecasting models, and strategic reviews as a paid add-on. This is where the BBA and data science training fully converge with the pharmacy and operational experience.

YEAR 2+

Angavu Platform — proper software, proper brand

Once revenue from subscriptions funds it, replace the Google Sheets backend with a proper web application. The brand, the client relationships, and the dataset all carry over. By then, "Angavu" means something in Nakuru — and that is the hardest part of any software product to build.

WHATSAPP BUSINESS PROFILE

How Angavu introduces itself

Three options. Option 1 is the right one for right now.

A

Angavu

Business Intelligence · Nakuru, Kenya

OPTION 1 — LEAD WITH CLARITY (RECOMMENDED NOW)

Angavu helps Nakuru businesses see their numbers clearly — stock levels, revenue, costs, and cashflow — through a simple Monday morning WhatsApp report. Finance, inventory, and pharmacy intelligence. First month free.

193 characters ✓

OPTION 2 — LEAD WITH THE PROBLEM (BEST FOR COLD OUTREACH)

Do you know which part of your business is quietly losing money this month? Angavu tracks your finances, stock, and cashflow — and sends you the answer every Monday morning. Nakuru's SME intelligence platform.

211 characters ✓

OPTION 3 — BRAND-FORWARD (USE ONCE YOU HAVE 10+ CLIENTS)

Angavu — Business Intelligence for the African SME. Finance tracking · Inventory management · Pharmacy intelligence · Strategic analytics. Based in Nakuru. Serving businesses that deserve to see clearly.

207 characters ✓
